

Rancho Foods, Inc.

Rancho Foods, Inc. plant, Vernon, CA.

Increase efficiency and profits by going wireless.

Rancho Foods, Inc.

Since 1982, Rancho Foods has been a family-owned-and-operated business. The meat distribution company started with just one man, John MacDonald Sr., and just one truck. The company now runs an updated fleet of more than 30 trucks and offers efficient, dependable service from the border of Mexico to Fresno and everywhere in between. Despite their success, they found that they could be even more productive if they could deploy wireless hand-held devices throughout their workforce.

Network Solutions Int'l designed the company's entire wireless computing platform from scratch. This was exclusively setup to support their Vernon Plant location. They then continued to support the work they had done. The net result was a more efficient company, and another leap in productivity.

KEY PROJECTS COMPLETED

Design Build of a new warehouse wireless platform.

Design Build of the Cisco Wireless (RF) system for all warehouse operations

Setup of all Intermec Wireless Handhelds

System Support
